M203: GRENADE LAUNCHER (40x46MM)

The American M203 grenade launcher (c. 1969) was developed as a replacement for the stand-alone, single-shot

This was ill-advised as rifles with an attached grenade launcher are too heavy. It is far better to equip soldiers with a

The best 40x46mm rounds are the M433 HEDP, which will penetrate 2" of armor plate, a 12" pine log, a 16" concrete block, or a 20" sandbag, and the M397A1 HE. On impact a small charge in the nose of the M397A1 grenade is detonated, which raises the grenade

M79 (c. 1961) that would be directly attached to the M16 rifle (pictured above). They are both breech loaded weapons.

lightweight rifle and a small, lightweight grenade launcher than a rifle with an attached grenade launcher which is difficult to use efficiently in ideal conditions, much less if one is exhausted or injured, due to its weight and compromised ergonomics. Thus the M203 works best as a stand-alone grenade launcher.

five feet into the air before an impact delay fuze detonates it. The collapsible stock on the LMT L2F (rail mounted M203) can be replaced with a folding stock, though some may prefer the FAB Defense FD-203 Standalone Conversion Kit (for the barrel mounted M203) which has a built-in folding stock.
